REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

None of the prior art disclose the claimed optical transmission cable interconnect for insertion in an undersea optical transmission cable as being recited in the independent claims of the present invention.

Claims 1-20 recite inter alia an optical transmission cable interconnect for insertion in an undersea optical transmission cable, comprising a plurality of modules, each of said modules including an internal housing having an outer dimension substantially equal to an outer dimension of an internal fiber splice housing of an undersea optical fiber cable joint, said internal housing including a pair of opposing end faces each having a retaining element for retaining the internal housing within an outer housing of said undersea optical fiber cable joint, the retaining element including an aperture through which at least one optical fiber extending from an end portion of the optical transmission cable extends into the internal housing; a sidewall interconnecting said opposing end faces, said sidewall including a receptacle portion having a plurality of thru-holes each being sized to receive a passive optical component; and a first segment of undersea optical transmission cable operationally coupling a first end face of a first of the modules to a second end face of a second of the modules.

Claims 21-35 recite inter alia an optical transmission cable interconnect for insertion in an undersea optical transmission cable, said interconnect comprising a plurality of undersea optical fiber cable joints; an optical amplifier module that includes an internal housing having an outer dimension substantially equal to an outer dimension

of an internal fiber splice housing of an undersea optical fiber cable joint, said internal housing including a pair of opposing end faces each having a retaining element for retaining the internal housing within an outer housing of said undersea optical fiber cable joint, the retaining element including an aperture through which at least one optical fiber extending from an end portion of the optical transmission cable extends into the internal housing; a sidewall interconnecting said opposing end faces, said sidewall including a receptacle portion having a plurality of thru-holes each being sized to receive a passive optical component; a plurality of segments of undersea optical transmission cable, a first of said segments operationally coupling a first end face of a first of the cable joints to a first end face of the optical amplifier module and a second of said segments operationally coupling a first end face of a second of the cable joints to a second end face of the optical amplifier module.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
